

FRAMR.
DIGITAL SIGNAGE

Megatechnik

FRAMR.

EASY AND INTUITIVE DIGITAL SIGNAGE SOLUTION

Show your digital content on any display – from TV to LED wall! This is digital signage, and we support you with FRAMR.

FRAMR. is the solution for simple and intuitive management & presentation of media content.

SOFTWARE

Using FRAMR. is very easy. FRAMR. Signage software is browser-based. This means that a browser and internet access are all you need to use our digital signage solution.

FRAMR. is straightforward, instantly available, always ready to use and suitable for any device. In addition, the software is continuously improved by our team. All updates are free of charge for every FRAMR. customer.

FEATURES

BROWSER BASED

FRAMR. Cockpit runs on any operating system without software installation. Manage all content directly in your internet browser, whether from your PC in the office or on the road from your smartphone.

USER COLLABORATION

Multiple users can work collaboratively. Turn your colleagues into copilots. You can collaboratively edit, schedule, and distribute content to all players.

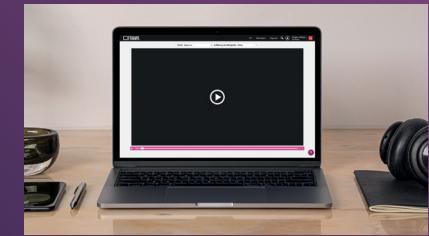

CLOUD

Your content is securely managed in the data center and can only be accessed by you and your verified players. We do the rest and make sure that FRAMR. is available 24/7.

LIVE-PREVIEW

No display nearby? No problem with FRAMR. Cockpit. Playlists can also be viewed and controlled directly in your browser. There you can make sure that everything looks exactly the way you want it. Preparing content becomes a breeze.

RELIABILITY

No bluescreens, no Windows updates, because FRAMR. Player run with a customized Linux system. It has been optimized for maximum reliability and permanently checks for an error-free system state.

SCHEDULING

FRAMR. gives you ultimate flexibility. Customize your content and plan it for different time schedules, locations, environments and weather conditions.

MOBILE FRIENDLY

Using the FRAMR. Cockpit, you can edit content flexibly with your smartphone or tablet wherever you are. Images and videos can also be uploaded in top quality from your mobile devices to your displays.

MONITORING

Monitor your displays and the shown content in real time, and respond quickly to changes or issues in the installation environment. Additionally, you can adjust content immediately based on your collected data.

MODULES

More than 50 modules offer you great opportunities to integrate additional content. And while you are creating new content in FRAMR.Cockpit, we are already working on the next one.

IMAGE

Display images and graphics on your device.

VIDEO

Play movies and animations in your playlist.

Easily change the playlist to another one.

CRYPTO CURRENCY

Get the current exchange rate of a digital currency on your display.

EMBED PLAYLIST

Show another playlist as an additional element in your playlist.

AND MANY MORE MODULES

Always up to date: FRAMR. is is continuously improved by our team.

FRAMR. PLAYER

PRO

The top seller impresses with powerful performance and maximum flexibility. From a single display to a 20 m² LED wall, it can easily handle all multimedia requirements. Its three display ports can realize different screen layouts with multiple screens: Synchronous, horizontally or vertically extended and completely separated.

ECO

The FRAMR.Player ECO offers you a fast and affordable entry into the world of digital signage. The player is designed for smooth 24/7 operation. Thanks to the optimized FRAMR.OS with a Linux core, blue screens, unexpected Windows updates, and pop-up windows are a thing of the past.

SDM

With FRAMR.Player SDM and screen merge into a single display unit. Mounted on the wall, it is especially suitable as a configurable room information display with automatic data synchronization (room occupancy). Even in the retail sector as an info source at the POS and as a digital menu in restaurants, the FRAMR.Player SDM always looks superb.

ULTRA

Boost your creativity to the max: More power for uncompromising performance on a maximum of two display outputs. In addition to the PRO features, the player can even display multiple high-resolution videos simultaneously with impressive playback quality.

AUDIO

With FRAMR.Player Audio, you can control your sound remotely at any time. Even the simplest music system becomes a streaming-capable audio center.

PANORAMA

FRAMR.Player Panorama ensures amazement. With its more than 8 million pixels and 4 display outputs, it creates space for innovative ideas and media installations that are unlike any other.

HTML 5

With the FRAMR.Player HTML5 for professional displays, you can play FRAMR. content directly on the display of your preferred manufacturer.

SCAN ME!

APP

Quickly installed and ready to use, the app turns your Android device into a full-fledged digital signage solution.

*In dual-mode, a virtual player is created for each display output, which can be activated separately in the FRAMR.Cockpit and thus operated independently with content. An additional license is required for each virtual player.

ADD ON

FRAMR.EYE

FRAMR.Add on EYE can recognize a different set of characteristics of people standing in front of the display - such as gender, age, or mood. This add-on is a separate unit combined with a camera that detects people in the near surroundings and analyzes them using artificial intelligence. This enables you to deliver content customized to your target audience - which is incredibly handy for all those users who want to display ads targeted to specific customers.

For example, if a child is standing in front of the camera, the smart screen can display those toys that are currently popular in the corresponding age group. People over 60 can be made aware of suitable magazines or gardening tools with the help of this extension.

Personalized advertising - without personal identification and storage of personal data, all data is evaluated on the device and then deleted immediately.

ADD ON

FRAMR.SENSOR

Show your customers the most relevant advertising messages in any weather! FRAMR.SENSOR's technology is able to detect the brightness, temperature, humidity and much more in the nearby environment. Using the data gained, you can address your audience in a more specific way and ultimately connect with them directly.

Want to display ads for umbrellas or medication for colds during bad weather and cold temperatures? With FRAMR.Add on SENSOR, you can schedule that to happen automatically. But the add-on can do even more: You can configure your displays and LED walls intelligently and adapt them to the current lighting conditions - so your message always comes across perfectly.

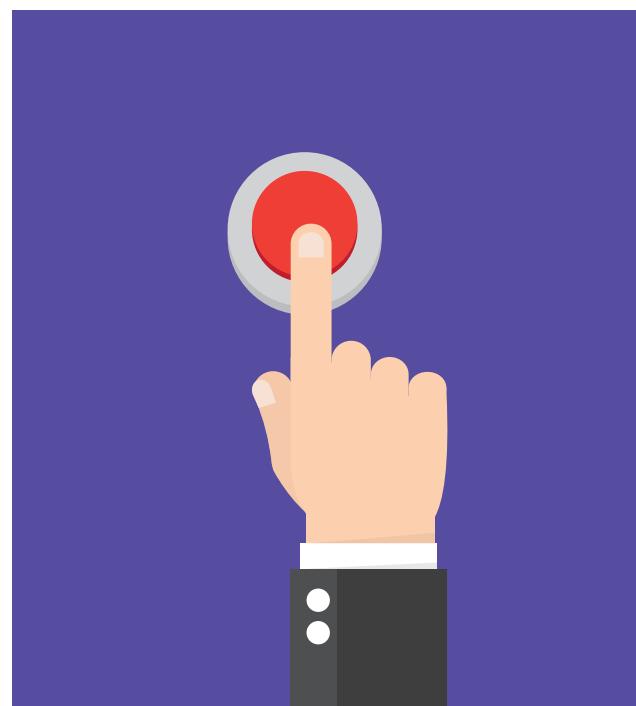

ADD ON

FRAMR.TRIGGER

In case of an emergency, with this add-on you won't lose valuable time. If the fire alarm system sounds, for example, the right actions are initiated fully automatically. In addition to acoustic warnings, your players will immediately display a visual warning corresponding to the situation, such as an evacuation message. Of course, many other subsequent operations are possible as well.

Up to eight potential-free electrical inputs can be connected and evaluated as input signals. These signals can trigger different reactions in your FRAMR. Players, all according to your needs.

ADD ON

FRAMR.BUTTON

The FRAMR.Add-On Button is a practical accessory for all FRAMR.Player owners. The button allows you to perform actions such as switching playlists or playing videos with a single press. It is easy to use and can be configured individually to suit your needs.

When connected to the FRAMR.Player PRO or PANORAMA, the button becomes a valuable helper in everyday use, making your experience with the player even more convenient. Especially when playing videos or audio, the FRAMR.Add-On Button provides a simple way to quickly switch between playlists or play a specific video.

Installation of the FRAMR.Add-On Button is extremely easy and requires no technical expertise. Simply connect the button to the player, activate it in the player settings, and you're ready to go.

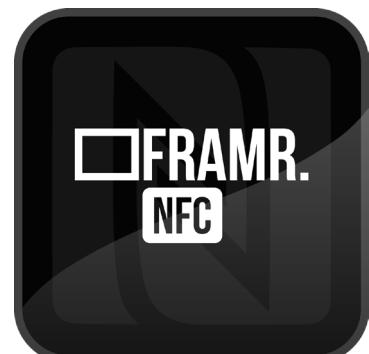

ADD ON

FRAMR.NFC

FRAMR.Add-On NFC is a groundbreaking add-on that allows you to transfer data to your smartphone and other NFC-enabled devices. With this innovative NFC tag, you can share information such as contact details, URLs, or wireless network connections with others.

What sets FRAMR apart from other NFC tags is the ability to store URLs on all FRAMR modules. This allows users to easily access and use information directly in front of a signage display. Using FRAMR is simple and secure. It provides an excellent way to share data with others without having to enter it manually.

With FRAMR, you can conveniently and quickly share your information while saving time and effort. Whether you work in a company or just want to share your information, FRAMR is the perfect solution for you.

ADD ON

FRAMR.VIDEO CAPTURE

With its modern HDMI input, the USB Capture HDMI Gen 2 delivers high-quality video and audio with zero latency. It supports resolutions up to 1080p60, ensuring crystal-clear picture quality and excellent sound reproduction. Whether you're recording live events, streaming video content, or creating high-quality visuals, this device delivers exceptional performance every time.

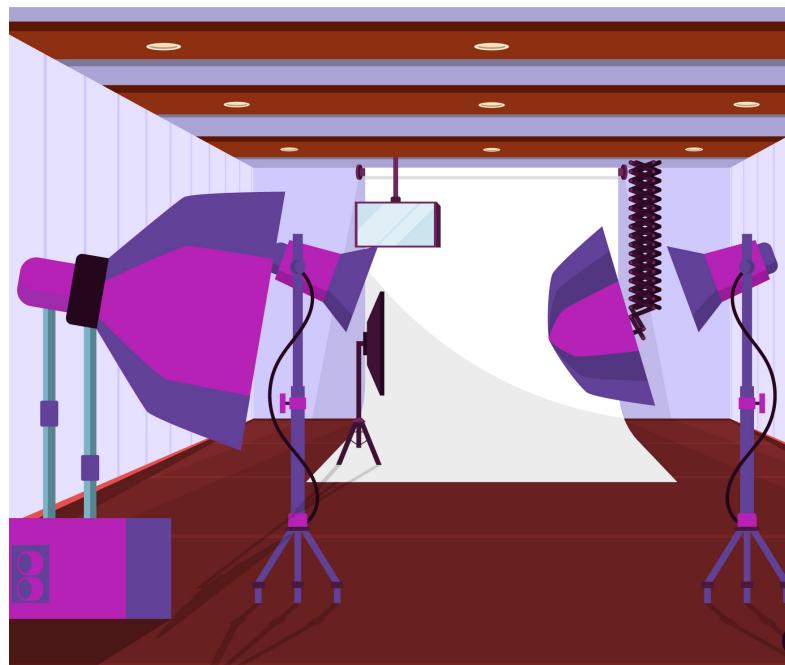

The USB 3.0 interface provides lightning-fast data transfer speeds, allowing you to capture and stream high-quality video in real time. The device is incredibly user-friendly and requires no drivers or software installation. Simply connect it to your computer's USB port, and you're ready to record and stream high-quality video and audio.

ADD ON

FRAMR.NDI

The integration of NDI into FRAMR. Signage allows you to receive high-quality video streams across a network of devices without complex signal routing or expensive hardware. Thanks to this feature, users can effortlessly incorporate high-quality NDI video streams into their applications without needing extensive programming knowledge. The NDI add-on for FRAMR Signage hardware is therefore an essential tool for users looking to create modern digital signage applications.
